Literature Survey

Survey:-

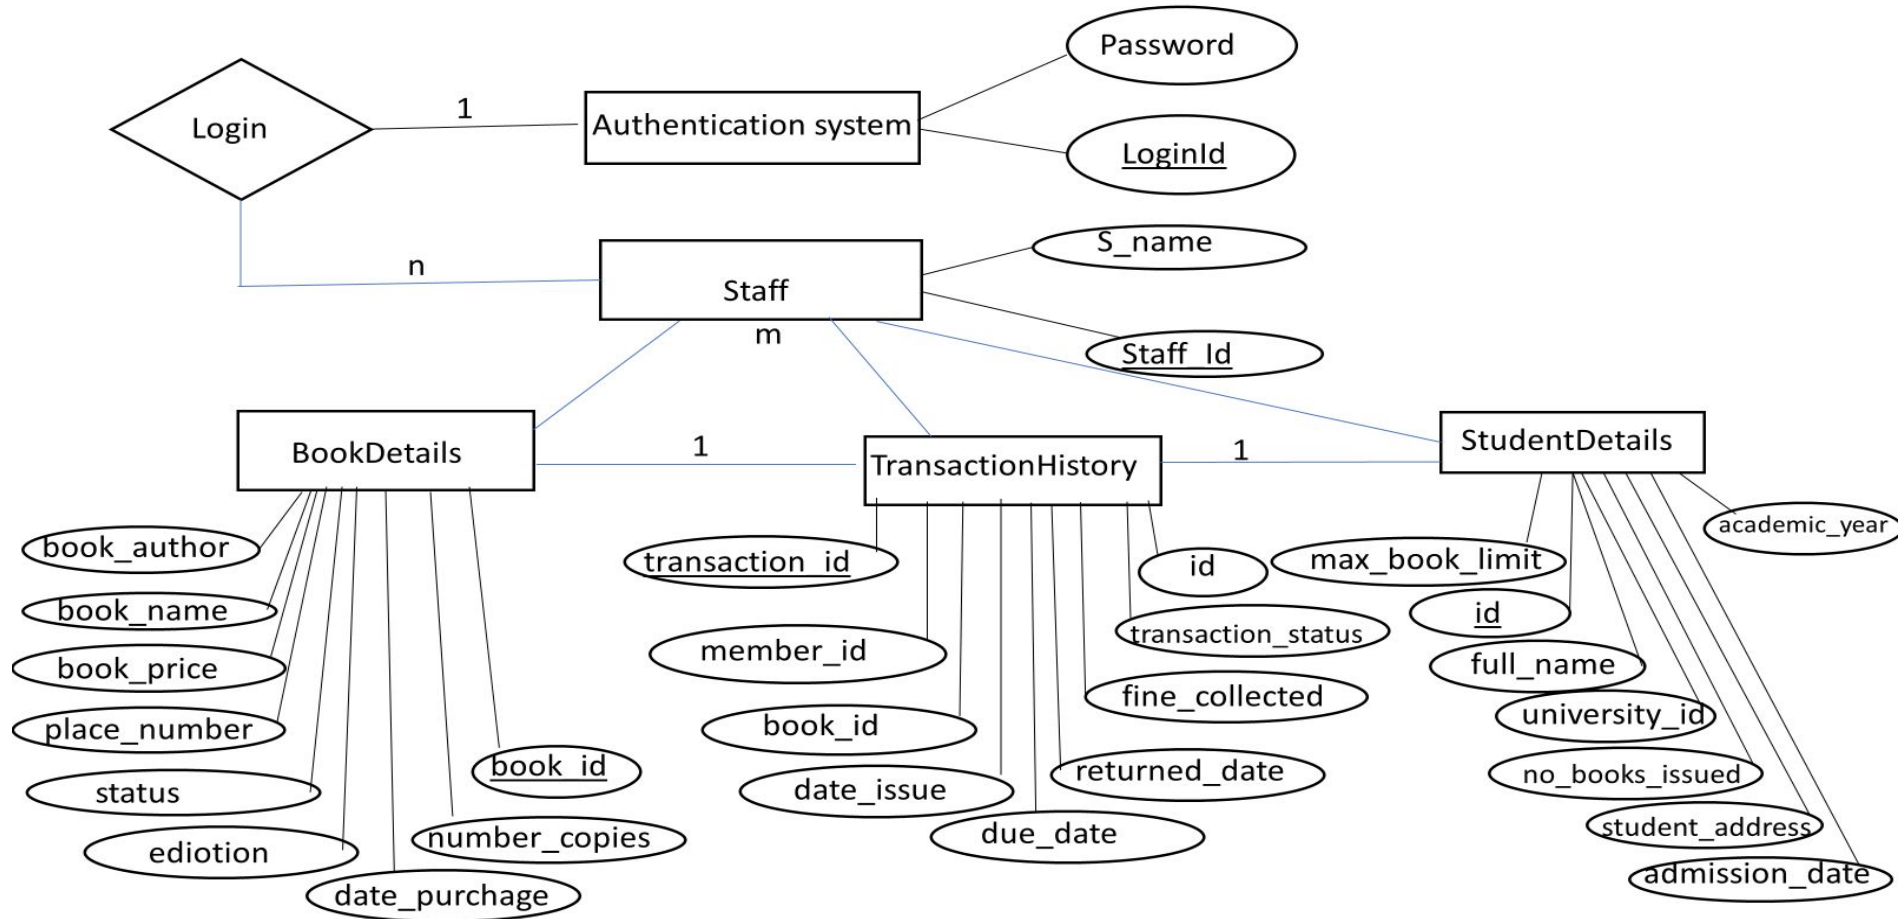

Several Library Management System ideas have arisen so far to bring changes into the design of Application with innovative ideas for enhance overall library effectiveness and service quality.

Project Abstract

- ❖ Developed in HTML & CSS & Angular Framework & Advance Java, the "Library Management System" project aims to optimize library operations.
- ❖ Core functionalities include adding new books, registering new members, and managing member transactions. Members can efficiently search for books and borrow them, with adherence to specific due dates.
- ❖ The system enables seamless book returns either on or before the due date, enhancing user experience. Featuring a user-friendly interface and robust backend functionality, the system aims to streamline library resource management.
- ❖ Leveraging HTML & CSS & Angular Framework & Advance Java technology, the project aims to enhance overall library effectiveness and service quality.

ER Diagram

Tools and Languages used

- ❖ Operating System: 11Windows 7/8/10/
- ❖ Application: HTML & CSS & Angular Framwork & Advance Java
- ❖ Database: MYSQL SERVER & Hibernate
- ❖ Software: Eclipse/Spring Tool MySQL Workbench

❖ Minimum hardware Requirement

- ❖ 386,486 processors with supportable motherboard.
- ❖ 64 MB RAM.

Expected Output

- ❖ Developed in HTML, CSS, Angular Framework, and Advance Java. Aims to optimize library operations.
- ❖ Core functionalities include:
 - Adding new books.
 - Registering new members.
 - Managing member transactions.
- ❖ Users can efficiently:
 - Search for books.
 - Borrow books with adherence to specific due dates.

Future Scope

FUTURE PLANNING

1

Create mobile apps for Android and iOS using Angular.

2

Provide instant notifications on book availability and due dates.

3

Implement robust security features with Java technologies.

4

Optimize system performance for scalability.

5

Analyze usage patterns and member preferences with Java.

Conclusion

- ❖ The "Library Management System" project is developed using HTML, CSS, Angular Framework, and Advanced Java technologies. It is designed to optimize various library operations.
- ❖ Core functionalities include adding new books, registering new members, and managing member transactions efficiently.
- ❖ Members can utilize the system to search for books easily and borrow them with adherence to specific due dates.
- ❖ The system ensures a seamless process for book returns, whether before or on the due date, enhancing user experience.

THANK YOU !
